

Safe-Guard with Thermal Overload Protection

Safety First Immersion Heaters

Quartz, Stainless Steel, Titanium and PTFE Sleeved

Immersion Heaters that are 10 times better

Guaranteed better - not just a little better... they're a lot better. In fact, they have at least ten advantages over other heaters.

The code of practice for electrical process heating in the metal finishing industry promotes safety and aims to reduce the incidence of fires. The code states that preferably the heater should have a built-in device to check the over temperature of the heater.

Serfilco heaters are automatically supplied with this safeguard to provide the preferred safety standard with protection for overtemperature.

- **Over-temperature control**
A standard feature on more models than any other manufacturer.
- **Earthed for Safety**
Amazingly, not every heater on the market is earthed, ours are. Every single one of them.
- **Custom Build**
The number of custom configurations available is virtually unlimited.
- **Greater Protection**
Thick sleeved, non-porous PTFE sleeving and low watts density.
- **Safety First**
Safety is built in, not added on. Our products are the safest available.
- **Industry Expertise**
Knowledgeable about metal finishing, and PCB processes and applications.
- **Customer Service**
We're more than ready to answer your questions and help solve your problems.
- **Quality Product**
UL-recognised, CSA-listed, CE-compliant. Tested to the highest possible standards.
- **Price Competitive**
You cannot find better quality, more reliable products for the price.
- **Guaranteed Better**
The quality of construction and performance are unequalled.
