

More benefits -  
not just one or two...  
but 4 more.

These non-stalling, lube-free pumps provide heavy duty, long life and trouble free operation.

Introducing the NEW metallic pumps, available in Aluminium and 316 Stainless Steel. They have diaphragms and elastomer material choice similar to the plastic models.

Plastic pumps are available in polypropylene and PVDF and are suitable for handling the most corrosive chemical duties. Utilising the same design and proven air valve assembly these pumps are the most reliable, performance engineered and quality product to withstand the toughest conditions.

■ **Non Stall**

The air supply maintains a constant pressure throughout the discharge stroke preventing the spool/shuttle combination from moving into neutral or stall position. They will not stall at slow speeds.

■ **Lube Free**

The air system and shuttle are manufactured from lubrication filled materials to virtually eliminate friction and increase air efficiency.

■ **Non Freeze**

Stall out due to freezing is virtually eliminated due to the insulating quality of the air valve plastic construction. It has the ability to slow air expansion and velocity without compromising performance.

■ **Quick Clamp**

Band clamp provides positive continuous seal and quick removal for maintenance. Overcomes problems with bolted designs, such as uneven torque, leading to leakage.
